

STEM AMBASSADOR SPOTLIGHT

Justice Jefferson
Biomedical Engineering

How did you select your college major? What was the biggest influence?

I defined life to three M's: Matter, Manner, and Magnitude. With my own personality, I've become a hero in my own regard to two of the topics. However, I'm still trying to learn a lot more about what people are made of and what makes them go round.

What advice would you share with K-12 students who are considering your major?

Perseverance isn't just a word but a lifestyle. To develop on something so crucial allows you to become something you may have never thought yourself to be...great.

What high school elective course do you wish you had taken to better prepare you for college?

The high school elective course I wish I had taken was AP Physics.

When you aren't in class or studying, what can you be found doing in your spare time?

Watching new movies or writing about what's on my mind.

What motivates you to get out of bed and go to class every day?

My family has been my anchor ever since I was born into this world. The future I seek is the best manmade utopia I can give them.

How do you or your major make a positive impact on society/our community?

I'm learning more about this topic to manifest the idea of how to make someone whole again. I want to revert everything to an origin, as long as that origin contains happiness.

What do you look forward to the most while being a STEM Ambassador?

I look forward to being able to interact with others, appreciating their mindset and new perspective that they can always tend to bring to the table.
